

Clinical Note:

Encounter Note (ED)

Patient: Priya Shah

Medical Record Number: 002-11290

Date of Birth: November 3, 1990

Encounter Date: March 18, 2026

Chief Complaint:

The patient presented with right lower quadrant abdominal pain.

History of Present Illness:

A 35-year-old female patient reported experiencing 12 hours of right lower quadrant pain accompanied by nausea and low-grade fever.

Assessment:

The patient was diagnosed with acute appendicitis.

Procedures:

On March 18, 2026, a laparoscopic appendectomy was performed.

Medications:

Pre-operatively, the patient received ceftriaxone 1 g IV and metronidazole 500 mg IV. Post-operatively, acetaminophen 650 mg PO was prescribed every 6 hours as needed for pain.

Observations:

The patient's temperature was 38.1 C and white blood cell count was 14.2 K/uL.

Plan:

Post-operative care will be provided, and the patient will be advanced to a regular diet as tolerated. A follow-up appointment in the surgery clinic is scheduled for two weeks.

Clinical Note:

Encounter Summary:

Patient Priya Shah, MRN 002-11290, born 1990-11-03, presented to the emergency department on 2026-03-18.

Chief Complaint:

The patient reported experiencing right lower quadrant abdominal pain.

History of Present Illness:

A 35-year-old female patient had been experiencing right lower quadrant abdominal pain, nausea, and low-grade fever for 12 hours.
